

CS 3005: Programming in C++

Overloaded Operators

This assignment requires extending the text-based application for working with PPM images. The user will now be able to add two images, take their difference, and multiple or divide them by a number.

The result will be the ability to blend two images, and to change the overall brightness of an image.

Assignment

In this assignment, you will update the `ppm_menu` program from the previous assignments. All of the previous assignments' functionality will remain intact.

Programming Requirements

The following files must be updated or created and stored in the `src` directory of your repository.

Make changes as described below.

Update `PPM.h, cpp`

The following methods must be added to the `PPM` class declaration in `PPM.h` and implemented in `PPM.cpp`.

- `bool operator==(const PPM& rhs) const;` Returns true if `*this` has the same number of pixels as `rhs`. Otherwise returns false.
- `bool operator!=(const PPM& rhs) const;` Returns true if `*this` has a different number of pixels than `rhs`. Otherwise returns false.
- `bool operator<(const PPM& rhs) const;` Returns true if `*this` has a fewer number of pixels than `rhs`. Otherwise returns false.
- `bool operator<=(const PPM& rhs) const;` Returns true if `*this` has a fewer number of pixels than `rhs` or equal number of pixels. Otherwise returns false.
- `bool operator>(const PPM& rhs) const;` Returns true if `*this` has a greater number of pixels than `rhs`. Otherwise returns false.
- `bool operator>=(const PPM& rhs) const;` Returns true if `*this` has a greater number of pixels than `rhs` or equal number of pixels. Otherwise returns false.
- `PPM& operator+=(const PPM& rhs);` Assumes `*this` and `rhs` have the same width and height. Adds the channel values from `rhs` into the channels for `*this`. If the resulting value is larger than max color value, set to max color value. Returns `*this`.
- `PPM& operator-=(const PPM& rhs);` Assumes `*this` and `rhs` have the same width and height. Subtracts the channel values from `rhs` from the channels for `*this`. If the resulting value is less than 0, set to 0. Returns `*this`.
- `PPM& operator*=(const double& rhs);` Multiplies every channel value of `*this` by `rhs`. If the resulting value is larger than max color value, set to max color value. If the resulting value is less than 0, set to 0. Returns `*this`.
- `PPM& operator/=(const double& rhs);` Divides every channel value of `*this` by `rhs`. If the resulting value is larger than max color value, set to max color value. If the resulting value is less than 0, set to 0. Returns `*this`.
- `PPM operator+(const PPM& rhs) const;` Creates a new `PPM` object with the same meta data (height, width, max color value) as `*this`. Sets the channel values in the new object to the sum of the channel values for `*this` and `rhs`. If the value is greater than max color value, set to max color value. Returns the new object.
- `PPM operator-(const PPM& rhs) const;` Creates a new `PPM` object with the same meta data (height, width, max color value) as `*this`. Sets the channel values in the new object to the difference of the channel values for `*this` and `rhs`. If the value is less than 0, set to 0. Returns the new object.
- `PPM operator*(const double& rhs) const;` Creates a new `PPM` object with the same meta data (height, width, max color value) as `*this`. Sets the channel values in the new object to the product of the channel values for `*this` and the value of `rhs`. If the value is greater than max color value, set to max color value. If the value is less than 0, set to 0. Returns the new object.
- `PPM operator/(const double& rhs) const;` Creates a new `PPM` object with the same meta data (height, width, max color value) as `*this`. Sets the channel values in the new object to the division of the channel values of `*this` and by the value of `rhs`. If the value is greater than max color value, set to max color value. If the value is less than 0, set to 0. Returns the new object.

Update `image_menu.h` add `image_filters.cpp`

Implement the following functions in a new file `image_filters.cpp`. Put the declarations in `image_menu.h`. The functions should use input image 1 as the left hand operand. If the right hand operand is a `PPM` object, use input image 2. If the right hand operand is a numeric value, use `getDouble` to ask the user for the value to use. If the operator does not change the left hand operand, assign the result into the output image.

- `void plusEquals(ActionData& action_data);` Modifies input image 1 by adding input image 2 to it.
- `void minusEquals(ActionData& action_data);` Modifies input image 1 by subtracting input image 2 from it.
- `void timesEquals(ActionData& action_data);` Modifies input image 1 by multiplying it by the double obtained by calling `getDouble` with a prompt of "Factor? ".
- `void divideEquals(ActionData& action_data);` Modifies input image 1 by dividing it by the double obtained by calling `getDouble` with a prompt of "Factor? ".
- `void plus(ActionData& action_data);` Sets output image to be the sum of input image 1 and input image 2.
- `void minus(ActionData& action_data);` Sets output image to be the difference of input image 1 and input image 2.
- `void times(ActionData& action_data);` Sets output image to input image1 times the double obtained by calling `getDouble` with a prompt of "Factor? ".
- `void divide(ActionData& action_data);` Sets output image to input image 1 divided by the double obtained by calling `getDouble` with a prompt of "Factor? ".

Update `image_menu.h` and `image_output.cpp`

- `void readUserImage2(ActionData& action_data);` Like `readUserImage1`, but stores into input image 2.

Update `controllers.cpp`

The following functions will require updates to their implementations.

- `void configureMenu(MenuData& menu_data)` add the new actions with the names and descriptions listed below.

Table of New Commands

Command Name	Function Name	Description
read2	<code>readUserImage2</code>	"Read file into input image 2."
"+"	<code>plus</code>	"Set output image from sum of input image 1 and input image 2."
"+="	<code>plusEquals</code>	"Set input image 1 by adding in input image 2."
"-"	<code>minus</code>	"Set output image from difference of input image 1 and input image 2."
"-="	<code>minusEquals</code>	"Set input image 1 by subtracting input image 2."
"*"	<code>times</code>	"Set output image from input image 1 multiplied by a number."
"*="	<code>timesEquals</code>	"Set input image 1 by multiplying by a number."
"/"	<code>divide</code>	"Set output image from input image 1 divided by a number."
"/="	<code>divideEquals</code>	"Set input image 1 by dividing by a number."

Update `Makefile`

This file must now also include a rule for `clean`. The following commands should work correctly.

- `make hello` - builds the hello program
- `make questions_3` - builds the questions_3 program
- `make ascii_image` - builds the ascii_image program
- `make image_file` - builds the image_file program
- `make ppm_menu` - builds the image_file program
- `make all` - builds all programs
- `make` - builds all programs (same as `make all`)
- `make clean` - removes all .o files, and all executable programs

- [Van Gogh /= 2.0](#)

Show Off Your Work

To receive credit for this assignment, you must

- use git to add, commit and push your solution to your repository for this class.
- successfully pass all unit tests and acceptance tests

Additionally, the program must build, run and give correct output.

Extra Challenges (Not Required)

- Create additional operators.
