Intrusion Detection systems 2 - Extra Credit

Cloud based IDS

Ok, TBH, in this part, you will just copy and paste a bunch of commands that you probably will not really understand what they do. Nor do I expect you to remember them. However, MOST stuff is done in the cloud nowadays. This is also good exposure to a cloud based environment (Google Cloud Platform). By the end of the lab, you will access a nice webpage that shows the threats that were detected.

Complete the lab titled "Cloud IDS: Qwik Start" on pluralsight. Take a screenshot of your cloud IDS screen showing the threats that you captured.

This is worth half as much as a regular assignment.
