

Web Security

This lab is mainly a walkthrough that demonstrates many different ways in which web-exploits can be achieved. You should register for an account at portswigger.net. You will want to save the password somewhere. Your task is to complete at least 20 of the apprentice level tasks. Choose ones that you think are interesting. Rather than blindly copying and pasting, try to make some sense as to what is going on.

To pass off

Upload a screenshot of your learning progress to canvas.
